Summary

Full-stack Software Engineer with 3+ years building enterprise web applications used by thousands of utility-industry users. Experienced across Vue.js, React, C#/.NET, REST APIs, and SQL Server, with a track record of owning features from initial design through production. Graduated Summa Cum Laude from RIT (GPA 3.93).

Languages & Technologies

Front-end: JavaScript (ES6+), TypeScript, Vue.js (Vuex/Pinia), React, Next.js, Tailwind CSS

Back-end: C#, .NET (ASP.NET Core), RESTful API Design, SQL Server

Tools & Practices: Git, Visual Studio, Claude Code, GitHub Copilot, Agile/Scrum

Experience

Software Engineer · Osmose Utilities Services

Jan 2022 – Jul 2025

- Owned front-end features end-to-end across 3 enterprise web applications used by thousands of utility field technicians, shipping on monthly release cycles alongside 2 engineers and a 3-person QA team.
- Built offline-first functionality and packaged web apps as mobile builds with Capacitor and Ionic, letting field technicians capture and sync data without reliable connectivity.
- Developed data-dense interfaces with Esri maps for geospatial visualization and AG Grid for large tabular datasets, surfacing complex operational data interactively.
- Migrated production front-ends from Vue 2 to Vue 3 and modernized state management with Pinia alongside existing Vuex, improving long-term maintainability.
- Delivered full-stack features including payroll, building and maintaining C#/.NET REST APIs backed by SQL Server for accurate, business-critical data processing.

Projects

Nextfolio · Full-Stack Storefront Web App

Jul 2026 – Present

- Built a full-stack storefront web app in Next.js 16 with cookie-based authentication, using custom middleware and Server Actions to protect a dashboard and manage sessions.
- Implemented parallel and intercepting routes to render product detail pages as shareable modals over a shop grid, with Suspense loading states; styled with Tailwind CSS and deployed on Vercel.

Fitness Tracker · Full-Stack React PWA

Jan 2026 – Present

- Built a full-stack fitness tracker with React, Vite, and Firebase covering workout logging, nutrition tracking, and weight-progress visualization.
- Integrated Recharts for interactive dashboards and Leaflet for GPS route mapping; configured as an installable PWA for native-like mobile use.

Education

Rochester Institute of Technology (RIT)

May 2022

B.S. Game Design and Development | GPA 3.93 | Summa Cum Laude
